

Inlustro - Zybisys Backend Training Week-2 Assessment

Test Duration :- 2Hrs.

Total Mark :- 50 (Each Question Carry 10 Mark)

- Create an express app in node which should count the number of times a user visits a web page and display it to the user.
 - Note: Use cookies for this question
- Create a route in express which should have a middleware to authenticate a user by checking whether a cookie exists for that particular user or not. If the cookie does not exist then use error handler middleware to throw error message.
- Using the 'fs' module in nodejs, read an html file and display its content on the web page.
- Create a user defined event in node which when fired should write some content to a file.
- Create a route in express which should accept an object id from the url and if that object id exists in the database then fetch the document of that particular object id and pass it on to the ejs template engine to view the data.
